DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michelle N. Lester on December 1, 2003.

Claim 9. (Cancelled).

Allowable Subject Matter

2. Claims 1-8 and 10 are allowed.
3. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or suggest a spark plug comprising: a tubular housing; a central electrode supported by said tubular housing in said tubular housing with electrical insulation therebetween; an earth electrode extending from one end of said tubular housing; a chip, arranged at an end surface of said earth electrode to face said central electrode, for providing a spark gap between said central electrode and said chip, said chip including a novel metal; and a fused junction layer between said earth electrode and said chip including components of said chip and said earth electrode to fix said chip to said earth electrode, wherein a cross-sectional area of said chip at a tip thereof on the

opposite side of said fused junction layer is not less than 0.12 mm^2 and not more than 1.15 mm^2 , and a length from said end surface to a top surface of said tip is not less than 0.3 mm and not more than 1.5 mm, and wherein said fused junction layer has a curved outer surface continuously connecting a peripheral outer surface of said chip to said end surface of said earth electrode, said curved outer surface being concave toward an axis of said chip, said curved outer surface being tapered toward said chip.

The prior art of record teaches curved fused junction layer for the center electrodes and the chip as shown in U.S. Patent No. 5,347,193 to Oshima, however prior art of record fails to teach or suggest the fused junction layer between the earth electrode and the chip has a curved outer surface continuously connecting a peripheral outer surface of the chip to the end surface of the earth electrode and the curved outer surface being concave toward an axis of the chip and further the curved outer surface being tapered toward the chip in order to improve connection strength between the chip and the earth electrode with a sufficient ignitability.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
